

BZA02:Map the Parent table with Age and Gender tables and find the overall concession percentage

Example:

```
// Get Id from Parent Table
// Get Name from Parent Table
// Get Age from Parent table: 45
// Get Gender from Parent table: F
// Compare age with age table and fetch the appropriate concession value: 20%
// Compare gender with gender table and fetch the appropriate concession value: 10%
// Add both concession values: 20+10=30
```

Results:

```
"Id": "1",
"Name": "Seeta",
"TotalConcession": "30"
```
